ES 2044
Hartpury Riding Students*
Open only to Hartpury Exchange students studying in the Equine Studies Program at Delaware Valley College

* These Courses are for Equine Studies Majors only

Food Science and Management (FS)

FS 1123
Introduction to Foodservice Systems
An introduction to the field of restaurant and foodservice management. Included is a discussion of the history of foodservice, the different types of foodservice operations, career opportunities available, future trends, and management. 3 hours Lecture—3 credits

FS 1130
Food, Culture and Cuisine
A study of foods from cultures of a diverse range of countries by examining the foods they produce and their culinary traditions and practices. Lecture includes the respective geography, crop production, religion, history and sociology of each region. Preparation of ethnic meals in the laboratory is part of the ethnographic study of each region. The student will develop a sophisticated understanding of how the values and ways of life of peoples around the globe relate to the development of various foods. There is a fee for ingredients used in the course. 2 hours Lecture and 3 hours Laboratory – 3 credits

FS 1203
Science and Technology of Foods
This course explores the application of science and technology to foods. The goal of this course is for students to gain a basic understanding of molecular components of foods, relationships between food composition and food structures and functions, and the relationships of molecular properties to food characteristic and quality. The interaction, reaction, and evaluation of foods due to formulation, processing and preparation are considered. The economic, culinary performance, nutritional and food safety issues that relate to the processing and marketing of foods are also considered. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 1205
Principles of Professional Cooking
This course will provide a foundation of fundamental knowledge of standards, principles, and techniques required for food production. The physical characteristics of food components are introduced as students learn their selection, care, and preparation. Emphasis is placed on foodservice terminology and quantity production. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 2116
Physical Sciences and Food
The objective of this course is to illustrate to the student how the physical sciences are applied to the evaluation and processing of foods. Students will also work with computational methods which are applied in technical work and develop skills in writing technical reports. Prerequisite: Elementary Functions. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 2212
Sanitation Management
Topics covered in this course include the microbiology of sanitation; communicable diseases associated with foods; insect and rodent control; chemistry of detergents and sanitizers; water and wastewater treatment; plant and equipment design; HACCP systems in food processing and foodservice; personnel training and motivation. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 3000, 4000
Selected Topics I and II
Special projects designed to meet individual needs of students in the specialized fields of food and agriculture. Projects will be arranged on a one-to-one basis with a department faculty member and with the approval of the Department Chairperson. 3 hours of student/faculty instruction per week—1 credit each

FS 3120
Introduction to Nutrition
Chemical composition of nutrients, their digestion, transport and metabolism, and their occurrence in foods are introduced. Nutrition throughout the life cycle is discussed, as well as topics of current interest such as sports nutrition and relationship of diet and behavior. 3 hours Lecture—3 credits
Course Descriptions

FS 3122
Food Engineering I
This course introduces the student to mass and energy balances, and the concept of unit operations. Emphasis is placed on the solution of problems using data from different sources. Topics covered include fluid mechanics, heat transfer, and mass transfer. Prerequisite: Physics II or Physical Sciences and Food. 2 hours Lecture and 2 hours Practicum—3 credits

FS 3211
Food Chemistry
The objective of this course is to increase the student’s knowledge of the chemical and physical-chemical properties of foods. Topics covered include the nature and stability of colloidal systems; emulsions, gels and foams; crystallization and its effects on the texture of foods; polysaccharides, their structure and properties; proteins; lipids and their reactions; browning reactions in food; colors and flavors. Prerequisite: Biochemistry. 3 hours Lecture and 3 hours Laboratory—4 credits

FS 3218
Food Microbiology
This course deals with characteristics of microorganisms found in foods, their enumeration by cultural and rapid methods, and control by preservation methods. Spoilage, traditional food fermentations, and production of ingredients by fermentation are discussed. Skills in sterile laboratory technique are developed. Prerequisite: General Microbiology. 3 hours Lecture & 3 hours Laboratory—4 credits

FS 3223
Dairy Products Processing
The chemical composition, physical properties and microbiology of milk are introduced. Manufacture of milk into cultured products, cheese, butter, dried and concentrated milks, and ice cream is discussed. Students learn laboratory techniques used in quality control and carry out processing procedures in the pilot laboratory. Offered in Spring Semester of odd numbered years. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 3224
Food Engineering II
A continuation of Food Engineering I. Topics include unit operations such as aseptic processing, drying, evaporation, filtration, membrane separation, size reduction, extrusion, particle size analysis, and refrigeration; consideration of electricity and its uses will be included. Prerequisite: Food Engineering I. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 3225
Purchasing, Storage, and Handling of Foods
The fundamentals of food service purchasing are introduced in this course. The functions of forecasting, ordering, purchasing, delivery, receiving, storage, inventory control, and legal responsibilities are discussed.Specifications, quality control and storage are discussed for individual food and nonfood products. Prerequisite: Introduction to Food Service Systems or permission of Instructor. Offered in Fall Semester of odd numbered years. 3 hours Lecture—3 credits

FS 3226
Service Systems Management
This course covers typical “front of the house” operations of the dining room: organization of the dining room, service styles, beverage and alcohol service, cashiering and payment management, and supervision and staff training. Prerequisite: Introduction to Food Service Systems or permission of Instructor. Offered in Spring Semester of even numbered years. 3 hours Lecture—3 credits

FS 3227
Foodservice Accounting and Cost Control
This course builds on the introductory management and accounting courses so that the student will be able to interpret, plan, and activate food, beverage, and labor cost control systems. Prerequisite: Accounting I or Accounting Fundamentals. Offered in Fall Semester of even numbered years. 3 hours Lecture—3 credits

FS 4004
Industrial Fermentations
This course introduces the student to the principles involved in bioreactor design and the separation and concentration steps which are used to purify the product. Applications such as biomass, alcohol, organic acids, enzymes, and antibiotics are considered. Prerequisite: Biochemistry or permission of Instructor. Offered in Fall Semester of even numbered years. 3 hours Lecture —3 credits

FS 4010
Introduction to Winemaking
This course introduces the student to wine grape varieties, history, their growth, factors which affect quality and the basic steps in winemaking. Prerequisite: Age 21. 2 hours Laboratory—1 credit
FS 4015
**Waste Treatment and Control**
This course surveys techniques for evaluating, modifying and disposing of industrial wastes. Emphasis is on the handling of solid and liquid wastes produced by agricultural and food processing activities. Offered in Fall Semester of odd numbered years. 2 hours Lecture—2 credits

FS 4041
**Senior Research**
Selected seniors engage in supervised investigations involving library work and laboratory or field experiments related to the food industry. Requirement: Permission of Department Chairperson. 1-3 credits

FS 4042
**Sensory Evaluation of Foods**
This course covers the physiology, psychology and chemistry of sensory response; the principles and application of discriminative, descriptive and preference testing; objective methods of food evaluation related to sensory properties of foods; selection and training of panelists; data analysis and interpretation. Offered in Spring Semester of even numbered years. 1 hour Lecture and 3 hours Laboratory—2 credits

FS 4112
**Principles of Food Processing and Preservation**
This course covers the background of food processing and maintenance of nutritive quality. This course covers the general characteristics of raw food materials, principles of food preservation, processing factors that influence quality, packaging, water and waste management, and sanitation. Lecture classes dealing with the principles of science and engineering rational of various processing systems and their unit operations. Preparation and preservation of perishable foods by modified atmosphere, low temperature, thermal processes, dehydration and other processes will be discussed in relation to processing variables. Topics included are control of microbiological, chemical and physical deterioration; physical, chemical and nutritional changes in food; and the equipment and packaging used in food preservation. Concluding lectures will cover management approaches to assuring efficiency of energy usage, quality maintenance, and product safety in the processing. 3 hours Lecture—3 credits

FS 4119
**Food Distribution Systems**
This course emphasizes the methods used to channel fresh and processed foods from producer to consumer. The areas discussed include assembling, transportation, warehousing and distribution to the retail level. Offered in Fall Semester of odd numbered years. 3 hours Lecture—3 credits

FS 4126
**Food Analysis**
This course introduces the student to common methods of analysis used in the food industry. The properties of food components and reasons for testing are discussed as related to the tests used. Instrumental and “wet” methods will be covered. Emphasis is placed on the basic principles involved in the analytical procedure. Prerequisite: Food Chemistry or Permission of Instructor. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 4131
**Foodservice Facilities and Equipment**
A discussion of the selection and use of foodservice equipment. Features and special uses of the equipment will be discussed along with basic operation, cleaning and maintenance. Also included will be purchasing of new and used equipment, equipment design, and basic kitchen design. Prerequisite: Introduction to Food Service Systems or Permission of Instructor. Offered in Spring Semester of even numbered years. 3 hours Lecture—3 credits

FS 4149
**Quality Assurance and Regulation**
This course focuses on an examination of statistical tests, interpretations and sample plans as applied to the control of food production systems and product evaluations. The requirements placed on quality assurance systems to insure compliance with regulatory mandates are covered. Particular attention is given to documents for the Food and Drug Administration, the Food Safety and Inspection Service and the Agriculture Marketing Service. Other regulatory laws that impact on the food industry are examined. 2 hours Lecture and 2 hours Laboratory—3 credits
FS 4212
Refined Foods and Food Ingredients
Food ingredients derived from plant materials and food products manufactured from those ingredients are the topics of this course. Starches and sweeteners, fats and oils, spices, as well as the manufacture of snack foods, confections, baked products, and nonalcoholic beverages will be discussed. Offered in the Spring Semester of even numbered years. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 4213
Introduction to Brewing Science
This course introduces the student to the basic methods of producing a malt beverage and the factors which influence beverage quality. Prerequisite: Age 21 and senior standing. 2 hours Laboratory and Discussion—1 credit

FS 4222
Quantity Food Production
In this course, the student is introduced to the principles and practices of production management. Students perform all aspects of meals, including planning, ordering, preparing and presenting. Quality control is stressed. Prerequisite: Principles of Professional Cooking. 2 hours Lecture and 3 hours Laboratory—3 credits.

FS 4223
Seminar
A review and discussion of the literature concerned with advancements in the food industry are features in this course. Prerequisite: Senior Standing or permission of Instructor. 1 hour Lecture and Discussion—1 credit

FS 4224
Food Product Development
Criteria considered in the development and production of a food product are the topics of this course. The format of the course is designed to draw upon and expand by application material from the Food Science areas of chemistry, nutrition, microbiology, statistics, and engineering. Sensory evaluation, packaging, and engineering economics will also be introduced. Prerequisite: Senior standing in Food Science and Food Technology Specialization or permission of Instructor. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 4228
Meat and Meat Products
A study of slaughtering, post mortem handling, meat fabrication, and further process and package systems. The microstructure and microbiology of meats is covered in conjunction with meat inspection, safety systems and quality evaluation. 2 hours Lecture and 3 hours Laboratory—3 credits

FS 4229
Foodservice Marketing Strategy
This course takes the traditional marketing concepts and applies them directly to the restaurant and foodservice industry. Current trends and consumer behavior are discussed along with the importance of menu design and pricing, advertising, and promotions. Prerequisite: Principles of Marketing or permission of Instructor. Offered in Spring Semester of odd numbered years. 3 hours Lecture—3 credits

FS 4232
Legal Aspects of Foodservice Management
This course is designed to help food service managers and owners prevent legal problems, or minimize the harmful effects of legal situations. Federal, state, and local laws and regulations are discussed on topics including liability, patron civil rights, employee relation, contracts, and security. How to choose and work with an attorney will also be discussed. Offered in Spring Semester of odd-numbered years. 3 hours Lecture—3 credits

Employment Program
FS 2370
Employment Program
Each student in Food Science and Management is required to spend 500 hours in approved jobs related to the student’s major. Registration for each Employment Program must occur prior to the beginning of a relevant experience. Registration materials are available from the Office of Career & Life Education, located in Segal Hall—4 credits.
